

# PROGAS<sup>®</sup>

## EQUIPPED

**ProGas** is an innovative technology, developed and patented by ILPRA, which is based on an exclusive work cycle and can be applied to its packaging machines.

By limiting the vacuum and compensation phases to just the tray instead of extending it to the complete chamber, the main advantage of **ProGas** is that it **reduces** the use and therefore the **wastage of gas** compared to the residual oxygen in the tray. Ilpra uses this technology to achieve substantially **improved productivity** thanks to a much **faster operating speed**. An additional benefit is that **ProGas** technology is also **eco-friendly** due to reduced air pollution.
