

Energy Saving, Environment Protection and Increased Productivity

In order to encourage responsible and sustainable production, ILPRA has focused attention on environmental issues and has always been committed to making products that reduce energy wastage and air pollution to a minimum. Pursuing this objective, **E-Mec** technology was developed and is applicable to our packaging machines. It is based **entirely on the electro-mechanical motion** of work stations, combined with a **latest generation electronic management system**.

E-Mec technology allows companies to attain **greater speed and higher production** volumes, while limiting the mechanical stress of machine components thanks to carefully studied, extremely precise motions.

By adopting E-Mec technology, companies are able to **reduce compressed air consumption up to 70%** and **limit noise emissions up to 60%**, thus greatly benefitting the staff who operate the machinery.
